

Pilestop®

Film-Coated Tablet

Diosmin + Hesperidin

Description

Pilestop® is a fixed dose combination of Diosmin and Hesperidin. It is a phlebotonic drug and a vascular protecting agent. It increases venous tone by prolonging the vasoconstrictor effect of noradrenaline on the vessel wall, and reduces blood venous stasis. It reduces the inflammatory process at the microcirculatory level, by inhibiting the adhesion, migration, and activation of leukocytes. This reduces capillary hyperpermeability and increases capillary resistance. It increases lymphatic contractions and improves lymphatic drainage.

Composition

Each film-coated tablet contains micronised Diosmin BP 450 mg and Hesperidin INN 50 mg.

Indications

- Acute hemorrhoidal attacks.
- Chronic hemorrhoidal disease.
- Chronic venous insufficiency.
- Lymphedema
